

Map 1 Description

This map identifies schools that classify as historic locations in relation to the age of the population that surrounds the area. The areas with the highest population density of 18-21 year olds are in purple, while the areas with the lowest density of that age range are in yellow. Overall, the map could be useful in identifying the number of historical locations in areas densely populated with college-aged students. This type of information could provide university administrators and county officials with the data to support policies to regulate college student use of historic structures. The data also would be helpful for identifying locations of potential historic preservation and potential residential barriers to their edification. As Athens-Clarke county wrestles with the growth of the University of Georgia on its residential and commercial infrastructure (see <http://flagpole.com/news/city-dope/2017/08/30/another-downtown-high-rise-and-more-local-news>), this map could provide helpful information for the historic preservation committee and the planning commission to create boundaries and zoning/building policies to protect historic structures and better support student populations
